

# **Pittsford Community Athletic Fields Improvement Project**

## **Executive Summary**

The Town of Pittsford is committed to providing quality athletic facilities and allowing for increased access to play fields for youth and adults throughout the community. This project includes athletic field and facility improvements for four parks in the Town of Pittsford. A brief description of the scope of work to be completed is provided below.

### **Thornell Farm Park**

The scope of work proposed for Thornell Farm Park will include the construction of a new synthetic turf field with lighting for evening events as well as three new natural grass fields. Two softball fields will be removed allowing for the site to be re-graded for these new multi-sport fields. An irrigation system will be installed in all natural grass fields including the remaining two softball fields to ease maintenance. A new playground with ADA accessibility will be constructed adjacent to the existing bathroom which will also be renovated. The project also includes lighting and surface improvements at the tennis courts. The perimeter trail around the park will be preserved.

### **Hopkins Park**

The improvements proposed for Hopkins Park include re-grading the existing fields to make the fields more playable. The project also includes the construction a new bathroom facility, a playground and installation of irrigations lines for the two multi-sport fields.

### **Willard Road Park**

Willard Road Park, which is currently used for agricultural purposes, will include the construction of three new softball fields with parking and a restroom facility. An irrigation system will also be installed for the new fields.

### **Great Embankment Park**

The scope of work for Great Embankment Park includes removal of two softball fields and the construction of three new multi-sport fields adjacent to the Erie Canal. The scope at this park will also include the construction of additional parking, sidewalks, a bathroom facility and a new playground.

All new bathrooms will be connected to public utilities for water, sanitary sewer, electric and gas. Proper drainage, stormwater management and erosion control measures will be installed and utilized at all of these parks in accordance with New York State Department of Environmental Conservation regulations.

Attached to this Summary are concept sketches of each of the four parks.
